

Drag and Drop Functionality

Friday, June 23, 2017 11:22 PM

Can perform the action of Drag and Drop:

- 1: We can perform drag and drop to move the element from Available section to Selected section by XPath locator. But we know we are using thief helper function for tf-virtual-listbox. So for this, we need to talk with thief team about this.
- 2: We can also perform the action of drag and drop to move the element from one group to another in the Available and Selected section.
- 2: We can perform drag and drop action to move the report from right side area to left side area. And also we can arrange LHP report by drag and drop functionality.

Can not perform the action of Drag and Drop:

- 1: We can not perform the action of drag and drop for column resize in the report.
- 2: We can not perform the action of drag and drop for move report from LHP to RHP area.

How to perform drag and drop

Source: Which item user want to drag.

Target: Where user want to drop.

```
Var source=element(by.xpath('//tf-navpane-item-text[normalize-space(.)="Performance"]'));  
  
Var target=element(by.xpath('//tf-navpane-item-text[normalize-space(.)="Weights"]'));  
  
browser.driver.actions().mouseDown(source).mouseMove(target).mouseUp(target).perform();
```
