

Framework Speed Sprint Agenda

Thursday, July 13, 2017 1:01 AM

Options gathered in meeting @ Jul 12th 2017

1. Removing Hardcode paths from staf/stax code
2. Cron reset to improve the performance
3. Read the config details from json file instead of .html file
4. Performance for TTM test cases loading
5. Calendar default to Day view to improve performance
6. Powershell script to start/ stop the process on grid
7. System Wide Emergency Notification on UI to stakeholders
8. Improve the memory optimization for the jobs reschedule (may not be possible in 2 days)
9. Optimizing the Staf logs by remove redundant / unnecessary log messages (need pre work to identify the logs)
10. Identify the fields that can be reduced or removed from API/JEP
11. Improve JEP performance on submitting job (Need some R&D before we approach)
12. Performance logging by recording number jobs receiving per second (Can this be done in 2 days)

Tasks picked for the speed sprint on Jul 20, 21:

1. Removing Hardcode paths from staf/stax code
2. Cron reset to improve the performance
3. Read the config details from json file instead of .html file
4. Performance for TTM test cases loading
5. Calendar default to Day view to improve performance

Speed sprint Q4 FY17
