

Tellus Data for Test Case Metrics

Wednesday, March 21, 2018 8:21 AM

Requirements

Gather data source for metrics executive dashboard by CIA: (Tellus + QAI + Product Tree)

- 1) Number of automated test cases run per build stage (e.g. prebuild, RC, etc.)
- 2) Amount of time a test case runs
- 3) Number of automated test cases that fail per build stage
- 4) Metrics per SBU.
- 5) Know whether it is a service test or e2e.
- 6) Number automated test cases that resulted in actual found bugs (Tellus + RPD + QAI)
- 7) Number of automated test cases that have not found bugs in last 6 months (Tellus + RPD + QAI)

--> Best Practice - workflow after a script failure in automation, we should have a consistent process across all SBU

1. Number of automated test cases run per build stage

The build stage is stored in Stage column of CalendarEvent table. Test cases are stored in SchedulerTests.

Possible Stage Values:

Prebuild
DEVEL
QA
Staging
Live
RELEASED

Prebuild Stage and PrebuildName Columns

Prebuilds are specified by these columns in CalendarEvent table:

Stage = Prebuild

PrebuildName = <prebuild_name>

Note: Jobs scheduled before 2014 had another format, which is no longer in use:

Stage=PREBUILD:<prebuild_name> (and PrebuildName is NULL)

Note that in the latter case, the PREBUILD prefix is all uppercase.

Note: Rows before 2014 might also have values '' (empty string) or '-1' because of bugs, but they no longer happen. Newer rows before 2017 might also have some NULL values because of bugs, but they should not happen now.

Example SQL

```
-- Get number of test cases grouped by Stage, for scheduled start datetime range
SELECT e.Stage, count(*) AS NumOfTestCases
FROM SchedulerTestGroups g
JOIN CalendarInstances i
  ON g.InstanceID = i.InstanceID
JOIN CalendarEvent e
  ON i.EventID = e.EventID
LEFT JOIN CalendarGroupPlanAssociations gpa
  ON g.GroupID = gpa.GroupID
```

```

LEFT JOIN CalendarEventPlanConfig pc
    ON gpa.PlanConfigID = pc.PlanConfigID
LEFT JOIN CalendarEventCaseAssociations eca
    ON pc.PlanConfigID = eca.PlanConfigID
LEFT JOIN SchedulerTestCategories c
    ON c.CategoryID = pc.TellusTestPlanID
LEFT JOIN SchedulerTests t
    ON eca.TellusTestCaseID = t.TestID
LEFT JOIN TellusTestcaseResults r
    ON g.GroupID = r.GroupID AND t.TestName = r.TestCaseName
WHERE e.IsDev = 0
    AND g.IsDeleted = 0
    AND i.IsDeleted = 0
    AND e.IsDeleted = 0
    AND (gpa.IsDeleted = 0 OR gpa.IsDeleted IS NULL) -- NULL if association is deleted
    AND (pc.IsDeleted = 0 OR pc.IsDeleted IS NULL)
    AND (eca.IsDeleted = 0 OR eca.IsDeleted IS NULL)
    AND i.Start >= '2018-03-20' AND i.Start < '2018-03-21'
GROUP BY e.Stage

```

Stage	NumOfTestCases
Devel	41
Live	287
Prebuild	473
QA	132

2. Amount of time a test case runs

Test Case duration = TCEndTime - TCStartTime from TellusTestcaseResults table

Example SQL:

```

-- List test case duration and status in time range
-- TCErrormsg: JSON string with test failure message.
-- If TCErrormsg = '{}', then mark test case as passed,
-- Else if TCErrormsg = other non-NULL string, then mark it as failed (test completed),
-- Else if TCErrormsg is NULL, then mark the test case as (environmental) error (test did not complete).
-- If TCStartTime or TCEndTime (i.e. TCDurationInSecs) is NULL, mark it as error.
-- If JustifierTestCaseID < 0, then mark it as error
-- (due to missing mapping from Tellus test case ID to Justifier test case ID).
SELECT t.JustifierTestCaseID,
    TCDurationInSecs = DATEDIFF(SECOND, r.TCStartTime, r.TCEndTime),
    TCStatus = CASE
        WHEN CONVERT(varchar, r.TCErrormsg) = '{}' THEN 'Passed'
        WHEN r.TCErrormsg IS NULL OR TCStartTime IS NULL OR TCEndTime IS NULL
            OR t.JustifierTestCaseID < 0 THEN 'Error'
        ELSE 'Failed'
    END,
    r.TCErrormsg
FROM SchedulerTestGroups g
JOIN CalendarInstances i
    ON g.InstanceID = i.InstanceID
JOIN CalendarEvent e
    ON i.EventID = e.EventID
LEFT JOIN CalendarGroupPlanAssociations gpa
    ON g.GroupID = gpa.GroupID
LEFT JOIN CalendarEventPlanConfig pc
    ON gpa.PlanConfigID = pc.PlanConfigID
LEFT JOIN CalendarEventCaseAssociations eca
    ON pc.PlanConfigID = eca.PlanConfigID
LEFT JOIN SchedulerTestCategories c

```

```

    ON c.CategoryID = pc.TellusTestPlanID
LEFT JOIN SchedulerTests t
    ON eca.TellusTestCaseID = t.TestID
LEFT JOIN TellusTestcaseResults r
    ON g.GroupID = r.GroupID AND t.TestName = r.TestCaseName
WHERE e.IsDev = 0
    AND g.IsDeleted = 0
    AND i.IsDeleted = 0
    AND e.IsDeleted = 0
    AND (gpa.IsDeleted = 0 OR gpa.IsDeleted IS NULL) -- NULL if association is deleted
    AND (pc.IsDeleted = 0 OR pc.IsDeleted IS NULL)
    AND (eca.IsDeleted = 0 OR eca.IsDeleted IS NULL)
    AND i.Start >= '2018-03-20' AND i.Start < '2018-03-21'

```

JustifierTestCaseID	TCDurationInSecs	TCStatus	TCErrormsg
81809	146	Passed	{}
81810	143	Passed	{}
81811	202	Passed	{}
-3141	NULL	Error	NULL
-3141	NULL	Error	NULL
118132	922	Failed	{"Test Case: data-fields": [{"Test Step ID: 522704...
118133	268	Passed	{}
118134	586	Failed	{"Test Case: bc-comp-tab": [{"Test Step ID: 5227...
124349	73	Failed	{"Toolbar": [{"Test Case (ID: 124349): Toolbar": [{"...
147617	NULL	Error	NULL
139406	644	Failed	{"Test Case: pint-mac-cov": [{"Test Step ID: 7033...
143308	26	Failed	{"Test Case: pint-outliers": [{"Test Step ID: 72763...
146750	138	Failed	{"Test Case: axp2-dls-tax": [{"Test Step ID: 74519...
132919	305	Passed	{}
132920	135	Passed	{}

Note: The negative JustifierTestCaseID indicate data issue: missing Tellus test case mapping to QAI test case ([RPD:39349165](#)).

3. Number of automated test cases that fail per build stage

Aggregate the query above.

```

-- Count number of automated test cases per stage, status
WITH cte AS (
SELECT t.JustifierTestCaseID,
    TCDurationInSecs = DATEDIFF(SECOND, r.TCStartTime, r.TCEndTime),
    TCStatus = CASE
        WHEN CONVERT(varchar, r.TCErrormsg) = '{}' THEN 'Passed'
        WHEN r.TCErrormsg IS NULL OR TCStartTime IS NULL OR TCEndTime IS NULL
            OR t.JustifierTestCaseID < 0 THEN 'Error'
        ELSE 'Failed'
    END,
    r.TCErrormsg,
    e.Stage
FROM SchedulerTestGroups g
JOIN CalendarInstances i
    ON g.InstanceID = i.InstanceID
JOIN CalendarEvent e
    ON i.EventID = e.EventID
LEFT JOIN CalendarGroupPlanAssociations gpa
    ON g.GroupID = gpa.GroupID
LEFT JOIN CalendarEventPlanConfig pc
    ON gpa.PlanConfigID = pc.PlanConfigID

```

```

LEFT JOIN CalendarEventCaseAssociations eca
    ON pc.PlanConfigID = eca.PlanConfigID
LEFT JOIN SchedulerTestCategories c
    ON c.CategoryID = pc.TellusTestPlanID
LEFT JOIN SchedulerTests t
    ON eca.TellusTestCaseID = t.TestID
LEFT JOIN TellusTestcaseResults r
    ON g.GroupID = r.GroupID AND t.TestName = r.TestCaseName
WHERE e.IsDev = 0
    AND g.IsDeleted = 0
    AND i.IsDeleted = 0
    AND e.IsDeleted = 0
    AND (gpa.IsDeleted = 0 OR gpa.IsDeleted IS NULL) -- NULL if association is deleted
    AND (pc.IsDeleted = 0 OR pc.IsDeleted IS NULL)
    AND (eca.IsDeleted = 0 OR eca.IsDeleted IS NULL)
    AND i.Start >= '2018-03-20' AND i.Start < '2018-03-21'
)
SELECT Stage, TCStatus, [TCCount] = count(*)
FROM cte
GROUP BY Stage, TCStatus
;

```

Stage	TCStatus	TCCount
Devel	Error	13
Live	Error	91
Prebuild	Error	29
QA	Error	24
Devel	Failed	19
Live	Failed	101
Prebuild	Failed	208
QA	Failed	70
Devel	Passed	9
Live	Passed	95
Prebuild	Passed	236
QA	Passed	38

4. SBU

Tellus database stores *product* ID but not the SBU. The SBU could be obtained via Justifier API using the product ID, as shown below.

In Tellus DB, QAI Product ID is stored in the JustifierProductID column of CalendarEvent table.

Example SQL Query:

```

-- Count number of automated test cases per product, stage, status
WITH cte AS (
SELECT t.JustifierTestCaseID,
    TCDurationInSecs = DATEDIFF(SECOND, r.TCStartTime, r.TCEndTime),
    TCStatus = CASE
        WHEN CONVERT(varchar, r.TCErrorMsg) = '{}' THEN 'Passed'
        WHEN r.TCErrorMsg IS NULL OR TCStartTime IS NULL OR TCEndTime IS NULL
            OR t.JustifierTestCaseID < 0 THEN 'Error'
        ELSE 'Failed'
    END,
    r.TCErrorMsg,
    e.JustifierProductID,
    e.Stage

```

```

FROM SchedulerTestGroups g
JOIN CalendarInstances i
    ON g.InstanceID = i.InstanceID
JOIN CalendarEvent e
    ON i.EventID = e.EventID
LEFT JOIN CalendarGroupPlanAssociations gpa
    ON g.GroupID = gpa.GroupID
LEFT JOIN CalendarEventPlanConfig pc
    ON gpa.PlanConfigID = pc.PlanConfigID
LEFT JOIN CalendarEventCaseAssociations eca
    ON pc.PlanConfigID = eca.PlanConfigID
LEFT JOIN SchedulerTestCategories c
    ON c.CategoryID = pc.TellusTestPlanID
LEFT JOIN SchedulerTests t
    ON eca.TellusTestCaseID = t.TestID
LEFT JOIN TellusTestcaseResults r
    ON g.GroupID = r.GroupID AND t.TestName = r.TestCaseName
WHERE e.IsDev = 0
    AND g.IsDeleted = 0
    AND i.IsDeleted = 0
    AND e.IsDeleted = 0
    AND (gpa.IsDeleted = 0 OR gpa.IsDeleted IS NULL) -- NULL if association is deleted
    AND (pc.IsDeleted = 0 OR pc.IsDeleted IS NULL)
    AND (eca.IsDeleted = 0 OR eca.IsDeleted IS NULL)
    AND i.Start >= '2018-03-20' AND i.Start < '2018-03-21'
)
SELECT JustifierProductID, Stage, TCStatus, [TCCount] = count(*)
FROM cte
GROUP BY JustifierProductID, Stage, TCStatus
;

```

JustifierProductID	Stage	TCStatus	TCCount
-1	QA	Failed	1
0	Live	Error	1
0	Live	Failed	2
0	Prebuild	Failed	16
33	Live	Failed	2
33	Live	Passed	1
145	QA	Failed	1
165	QA	Error	1
165	QA	Failed	4
165	QA	Passed	3
170	QA	Error	1
170	QA	Failed	1
170	QA	Passed	2
176	Live	Failed	1
176	QA	Failed	5
176	QA	Passed	1
177	Devel	Failed	1
177	Live	Failed	1
178	Live	Passed	1

Note: The JustifierProductID values -1 and 0 are invalid values, caused by environmental (Tellus) bugs ([RPD:39345855](#)).

Example Justifier API Query - Get SBU by Product ID: _____

HTTP GET <http://is.factset.com/justifier/api/FactSetProducts/3673>

where 3673 is JustifierTestCaseID.

```
<FactSetProduct $id="i1">
  <Id> 3673 </Id>
  <EntityKey> 3327301 </EntityKey>
  <PathKey> 3645-299-3673 </PathKey>
  <Name> PA 3.0 </Name>
  <Description nil="true" />
  <Notes nil="true" />
  <Path> Analytics > Portfolio Analysis > PA 3.0 </Path>
  <lastUpdatedDate> 2017-02-02T18:26:15.17 </lastUpdatedDate>
  <UpdatedBy> cwermer </UpdatedBy>
  <Deleted> false </Deleted>
</FactSetProduct>
```

The SBU is in its Path element:

```
<Path> Analytics > Portfolio Analysis > PA 3.0 </Path>
```

5. Service Test vs E2E

Service tests have TestEnvironment values WST, SoapUI, or SITINT in CalendarEvent table.

Other values such as FPE, SGE are e2e tests. That is, add this expression to query above:

```
ServiceOrE2e = CASE
  WHEN e.TestEnvironment = 'SITINT' OR e.TestEnvironment = 'WST'
    OR e.TestEnvironment = 'SoapUI' THEN 'Service'
  ELSE 'E2E'
END
```

Example SQL:

```
-- Determine if service test or e2e test
SELECT t.JustifierTestCaseID,
       TCDurationInSecs = DATEDIFF(SECOND, r.TCStartTime, r.TCEndTime),
       TCStatus = CASE
         WHEN CONVERT(varchar, r.TCErrorMsg) = '{}' THEN 'Passed'
         WHEN r.TCErrorMsg IS NULL OR TCStartTime IS NULL OR TCEndTime IS NULL
           OR t.JustifierTestCaseID < 0 THEN 'Error'
         ELSE 'Failed'
       END,
       r.TCErrorMsg,
       e.JustifierProductID,
       e.Stage,
       ServiceOrE2e = CASE
         WHEN e.TestEnvironment = 'SITINT' OR e.TestEnvironment = 'WST'
           OR e.TestEnvironment = 'SoapUI' THEN 'Service'
         ELSE 'E2E'
       END
FROM SchedulerTestGroups g
JOIN CalendarInstances i
  ON g.InstanceID = i.InstanceID
JOIN CalendarEvent e
  ON i.EventID = e.EventID
LEFT JOIN CalendarGroupPlanAssociations gpa
  ON g.GroupID = gpa.GroupID
LEFT JOIN CalendarEventPlanConfig pc
  ON gpa.PlanConfigID = pc.PlanConfigID
LEFT JOIN CalendarEventCaseAssociations eca
```

```

    ON pc.PlanConfigID = eca.PlanConfigID
LEFT JOIN SchedulerTestCategories c
    ON c.CategoryID = pc.TellusTestPlanID
LEFT JOIN SchedulerTests t
    ON eca.TellusTestCaseID = t.TestID
LEFT JOIN TellusTestcaseResults r
    ON g.GroupID = r.GroupID AND t.TestName = r.TestCaseName
WHERE e.IsDev = 0
    AND g.IsDeleted = 0
    AND i.IsDeleted = 0
    AND e.IsDeleted = 0
    AND (gpa.IsDeleted = 0 OR gpa.IsDeleted IS NULL)
    AND (pc.IsDeleted = 0 OR pc.IsDeleted IS NULL)
    AND (eca.IsDeleted = 0 OR eca.IsDeleted IS NULL)
    AND i.Start >= '2018-03-20' AND i.Start < '2018-03-21'

```

JustifierTestCaseID	TCDurationInSecs	TCStatus	TCErrormsg	JustifierProductID	Stage
-3141	NULL	Error	NULL	3670	QA
-3141	NULL	Error	NULL	3670	QA
81811	202	Passed	{}	277	Live
135942	491	Passed	{}	4242	QA
118135	668	Passed	{}	3940	Prebuild
118136	1317	Passed	{}	3940	Prebuild
118137	511	Passed	{}	3940	Prebuild
146750	136	Failed	{"Test Case: axp2-dls-tax": [{"Test Step ID: 745...	4840	QA
138739	223	Passed	{}	4347	Prebuild
112468	149	Failed	{"Test Case: univ-multi-stat-chart": [{"Test Step I...	4347	Prebuild
114475	54	Passed	{}	4347	Prebuild
116376	239	Failed	{"Test Case: returns-chart": [{"Test Step ID: 512...	4347	Prebuild
117876	68	Failed	{"Test Case: multi-statistic-chart": [{"Test Step I...	4347	Prebuild
112429	141	Failed	{"Test Case: edit-currency": [{"Test Step ID: 58...	4347	Prebuild
116264	127	Failed	{"Test Case: currency-risk-free-rate": [{"Test Ste...	4347	Prebuild
139216	180	Failed	{"Test Case: risk-free-rate": [{"Test Step ID: 701...	4347	Prebuild
112047	120	Passed	{}	4347	Prebuild
115199	84	Failed	{"Test Case: annualization-per-year": [{"Test Ste...	4347	Prebuild

Note: Negative JustifierTestCaseID is an environmental error, as indicated by TCStatus 'Error' (caused by missing Tellus test case mapping to Justifier test case ID.)

Common SQL

The queries above have this commonality, which gets a list of job test cases:

```

FROM SchedulerTestGroups g
JOIN CalendarInstances i
    ON g.InstanceID = i.InstanceID
JOIN CalendarEvent e
    ON i.EventID = e.EventID
LEFT JOIN CalendarGroupPlanAssociations gpa
    ON g.GroupID = gpa.GroupID
LEFT JOIN CalendarEventPlanConfig pc
    ON gpa.PlanConfigID = pc.PlanConfigID
LEFT JOIN CalendarEventCaseAssociations eca
    ON pc.PlanConfigID = eca.PlanConfigID
LEFT JOIN SchedulerTestCategories c
    ON c.CategoryID = pc.TellusTestPlanID
LEFT JOIN SchedulerTests t
    ON eca.TellusTestCaseID = t.TestID
LEFT JOIN TellusTestcaseResults r
    ON g.GroupID = r.GroupID AND t.TestName = r.TestCaseName
WHERE e.IsDev = 0

```

```

AND g.IsDeleted = 0
AND i.IsDeleted = 0
AND e.IsDeleted = 0
-- NULL if test case association is deleted
AND (gpa.IsDeleted = 0 OR gpa.IsDeleted IS NULL)
AND (pc.IsDeleted = 0 OR pc.IsDeleted IS NULL)
AND (eca.IsDeleted = 0 OR eca.IsDeleted IS NULL)

```

Notes:

The `e.IsDev = 0` limits the query to only production test runs (excludes tester's development test runs.)

TCErrormsg: JSON string with test failure message.

If TCErrormsg = '{}', then mark test case as passed,

Else if TCErrormsg = other non-NULL string, then mark it as failed (test completed),

Else if TCErrormsg is NULL, then mark the test case as (environmental) error (test did not complete).

If TCStartTime or TCEndTime (i.e. TCDurationInSecs) is NULL, mark it as error.

If JustifierTestCaseID < 0, then mark it as error

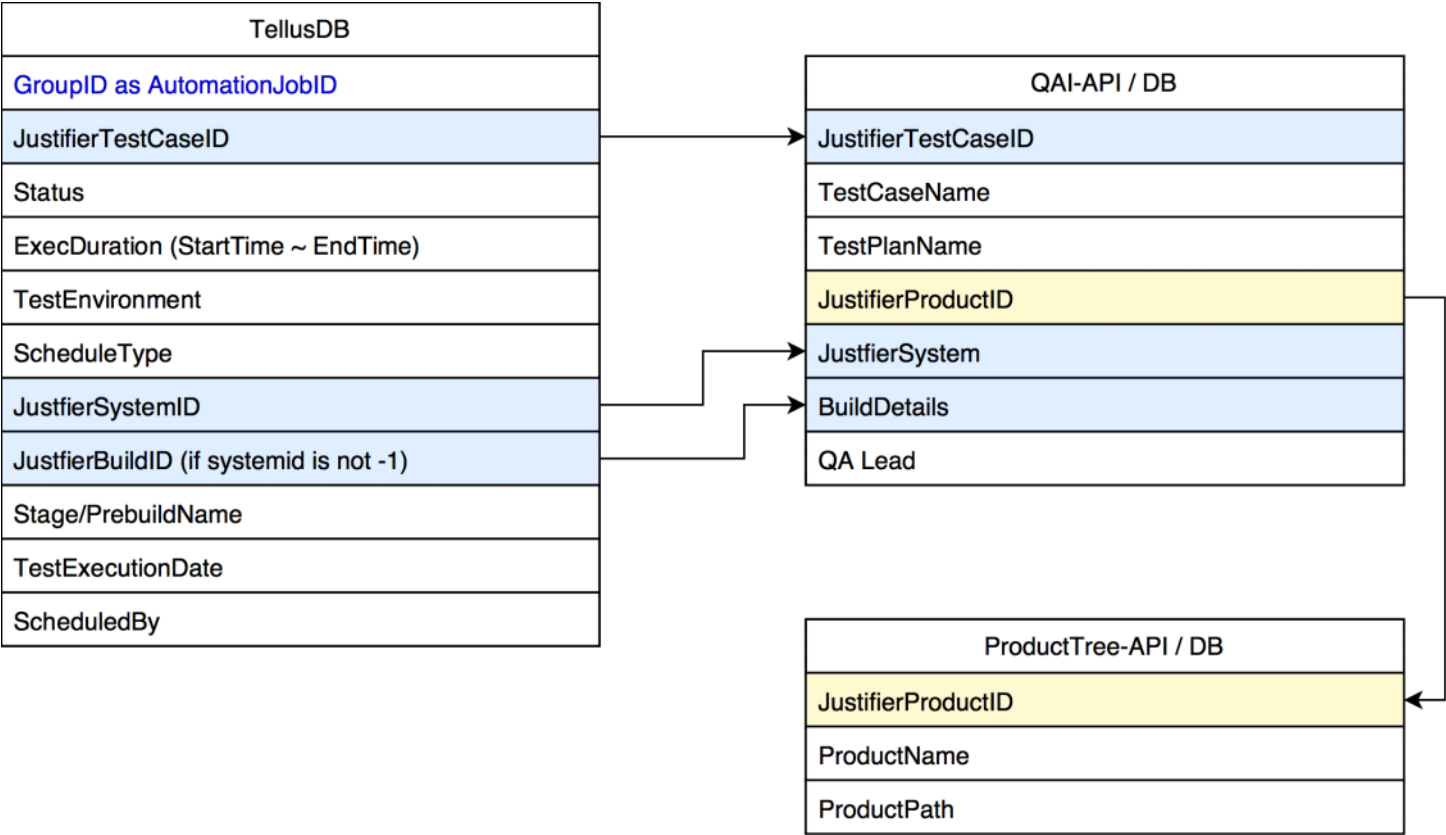

(it is due to missing mapping from Tellus test case ID to Justifier test case ID; negative value is "placeholder" for the test case mapping).

TCErrormsg analysis

Thursday, March 22, 2018 12:43 PM

Some analysis of test case error messages from the TCErrormsg column of TellusTestcaseResults table.

Note that protractor tests have assertions but other project types such as TestComplete do not use assertions, therefore there is no standard way to determine if they are "assertion" failures or script errors.

Example TCErrormsg

This is an example test that does have assertions:

```
{
  "Test Case: data-fields": [{
    "Test Step ID: 522704": [{
      "Action: Verify that \"CDS 7yr (USD)\" is not having null value": ["Failed: No
element found using locator: By(xpath, //*[normalize-space(.)=\"CDS 7yr
(USD)\"]/ancestor::div[contains(@class,\"form-row\")]/div[2]//label)"]
    }]
  }, {
    "Test Step ID: 522707": [{
      "Action: Verify that the Input Container doesn't contain any extra fields":
["Expected 30 to equal 29."]
    }]
  }]
}
```

Note: It could have multiple levels of objects.

Samples of error messages

Looking through samples of TCErrormsg, the **great majority of error messages are probably more likely script issues**, as the great majority of message are not assertion failure. Essentially, only assertion failures has the possibility of product defect, but it is still possible that the script has the wrong expectations, i.e. it could still be script issue.

In actual findings, product defects are a small percentage of test failures. So, the test failures more likely script issues, until found otherwise.

Also, relatively few samples are likely system (Tellus) issues than script issues. Tellus issues also manifest themselves in another way: missing test results (as it gets Python "dispatcher" exception), and TCErrormsg would be NULL in that case.

Some samples of TCErrormsg messages from a few days in March 2018 are provided in a separate document because of the large size.

Examples of Probable Script Issues:

- Failed: No element found using locator
(It is more likely that this is script issue.)
- ...is not a function
- Unable to get the reference

- Cannot read property ... of undefined
- call function result missing 'value'
- Could not get ... window reference
- undefined method ... for false:FalseClass
- undefined method ... for nil:NilClass
- undefined local variable or method
- No window with parameters ... exists
- Element ... not found after waiting for ... secs.
- Unable to get the reference ...
- uninitialized constant
- keyword missing at ...
- ... does not contain ... missing

Example Assertion Failures:

- **Expected** 'American Airlines 2011-1 Pass Through Trust' **to equal** 'American Airlines, Inc.'
- The XPathContains **assertion failed**
- **Expected** = "undefined", **found** = "CASH_CZK_1DAY"

Script assertion failures raises possibility of product issue, but could still be script issue (wrong expectations).

Example Probable Tellus ("environment") Issue:

- Timed out to get FactSet online

But it is still possible that this is script issue.

Tellus DB - TellusStaxJobStatus table

Tuesday, March 20, 2018 11:43 AM

TallusStaxJobStatus table is "post-mortem" job status analysis. It has no "in-progress" status.

JobStatus Codes

0 -> job did not start yet

StatusMessage will be NULL

1 -> completed without any exception

Completed cleanup phase

Note: In actual data, some TellusTestResult phase might be incomplete, or passed + failed < total

2 -> started but did not complete

StatusMessage will be NULL

3 -> timed out

StatusMessage will be NULL

4 -> terminated with some exception

StatusMessage usually not NULL

Example StatusMessages

Example StatusMessage Values:

Error while reading the test configuration file

Error for Log parsing

Test logs not generated

Error at copy test suite to VM

Error for creating directory in shared drive

Error at VM deploy

NULL

Force termination by tellus-admins

Error for copying test logs to shared drive

Error while reading the test configuration file.

Error at Mapping TDrive

Error at testlist update or create

Error while downloading test suite

Error at serial number allocation

Tellus DB - CalendarEvent table

Thursday, March 22, 2018 8:11 AM

Stage and PrebuildName Columns

Prebuilds are specified by these columns in CalendarEvent table:

Stage = Prebuild

PrebuildName = <prebuild_name>

Note: Jobs scheduled before 2014, had another format, which is no longer in use:
Stage=PREBUILD:<prebuild_name> (and PrebuildName is NULL)

Note that in the latter case, the PREBUILD prefix is all uppercase.

Possible Stage Values:

Prebuild

DEVEL

QA

Staging

Live

RELEASED

Service Testing Notes

Currently TestEnvironment has SoapUI, SITINT, WST.

WST is Web Service Testing.

In the future, SoapUI and SITINT will fall under WST:

- Tellus TestEnvironment will be WST.
- Tool in QAI and ProjectType in Tellus will be SoapUI, WebSocket, etc.

Tellus DB - SchedulerTests table

Thursday, March 22, 2018 9:02 AM

Column Description

JustifierTestCaseID

QAI test case ID.

If value is negative, it is a placeholder for test cases that do not (yet) have mapping to QAI test case. Its value is the negative value of *Tellus* test case ID.

It is (negative) unique value, because this column has UNIQUE NOT NULL constraint

Schema

```
USE [tellus]

Tests Resulting in RPD

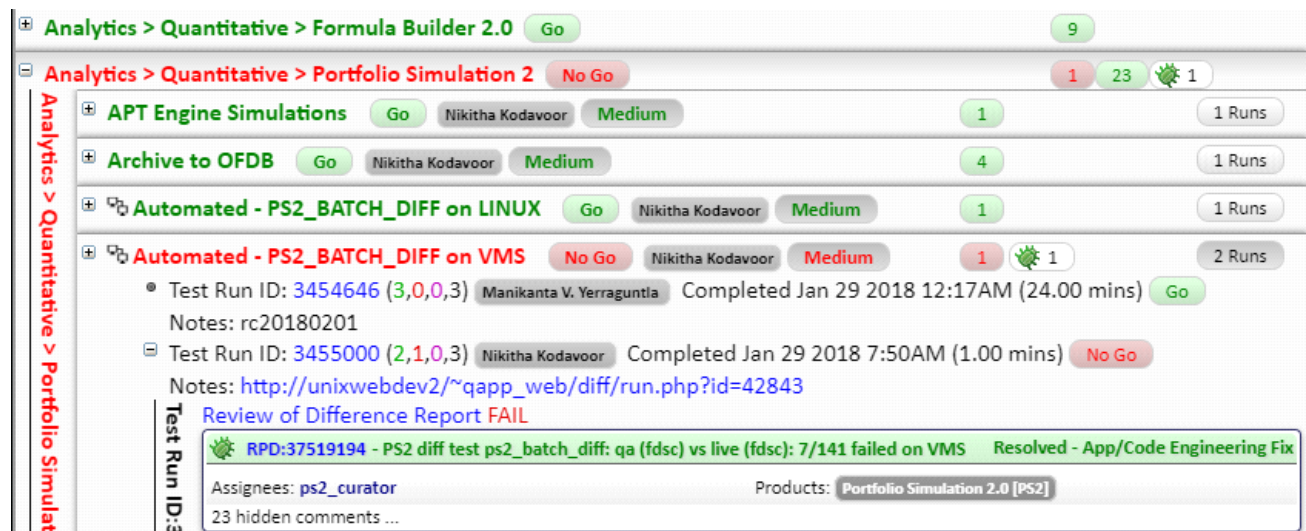

Friday, March 23, 2018 9:50 AM

[In Progress]

Example QAI SWP with RPD:

This example is not necessarily automated test, but it shows QAI test result's association with RPD. "No Go" SWP tests could have associated RPD.

<http://is.factset.com/justifier/#31955>

The screenshot displays the Factset Justifier interface. The left sidebar shows a navigation tree with 'Analytics > Quantitative > Portfolio Simulation' selected. The main panel shows a list of tests under 'Portfolio Simulation 2'. The test 'Automated - PS2_BATCH_DIFF on VMS' is highlighted, showing a 'No Go' status. Below the test list, a detailed view for 'Test Run ID: 3455000' is shown, indicating it was completed on Jan 29 2018 at 7:50AM. The 'Review of Difference Report' is displayed as 'FAIL'. At the bottom, a green banner indicates an associated RPD: 'RPD:37519194 - PS2 diff test ps2_batch_diff: qa (fdsc) vs live (fdsc): 7/141 failed on VMS Resolved - App/Code Engineering Fix'. The assignee is 'ps2_curator' and the product is 'Portfolio Simulation 2.0 [PS2]'.

Test Name	Status	Assignee	Priority	Count	Runs
APT Engine Simulations	Go	Nikitha Kodavoor	Medium	1	1 Runs
Archive to OFDB	Go	Nikitha Kodavoor	Medium	4	1 Runs
Automated - PS2_BATCH_DIFF on LINUX	Go	Nikitha Kodavoor	Medium	1	1 Runs
Automated - PS2_BATCH_DIFF on VMS	No Go	Nikitha Kodavoor	Medium	1	2 Runs

Test Run ID: 3455000
Notes: http://unixwebdev2/~qapp_web/diff/run.php?id=42843
Review of Difference Report **FAIL**
RPD:37519194 - PS2 diff test ps2_batch_diff: qa (fdsc) vs live (fdsc): 7/141 failed on VMS Resolved - App/Code Engineering Fix
Assignees: ps2_curator
Products: Portfolio Simulation 2.0 [PS2]
23 hidden comments ...

RPD type is "Bug Report".

If RPD Status is Resolved as "Engineering Fix", then it is confirmed bug (there is no "Accepted as Bug" status).

Tellus job metrics/results tables

Monday, March 26, 2018 8:12 AM

Job phases, in order:

- VMTimeMetrics
- MetricDownloadTestCases,
- MetricInstallAtlasBuild,
- TellusTestResult, TellusTestcaseResults
- MetricProcessLogs,
- MetricCleanup

VMTimeMetrics to MetricProcessLogs are chunk level; MetricCleanup is job level only.

FPE uses all phases: VMTimeMetrics, ..., to MetricCleanup.

SGE only uses MetricDownloadTestCases, TellusTestResult, MetricProcessLogs, MetricCleanup.

SITINT, WST, SoapUI do not use phases.
